"Green Alternative" Chairperson explains the radio station "Commersant" that the energy field was mentioned in the environmental protection project of the "Georgian Dream" election program but after the government program was prepared this article has been removed for unknown reasons. Manana Kochladze connects this with the fact that the energy is not considered as a leading field in Georgian politics.

However, Kochladze is surprised why the Ministry of Energy has not demanded this chapter to be included in the government program. In her words, not only construction of power plants but also the correct policy is a priority in the Georgian energy sector.
